

## Safely restricted

IFI has launched a simple, yet effective, hardware device to hold doors open, preventing shutting and slamming of doors in normal wind conditions. The Sabre Hold Open Door Restrictor is the latest addition to the Sabre range of hardware from IFI.

The restrictor, which, the company says, is ideal for French doors, provides a safety solution in situations where there are young children. The restrictor can prevent the sudden closing of doors that can trap fingers between a door and its frame if the door closes unintentionally.

The restrictor can also be easily disconnected to allow unrestricted operation. The product is easy to install on PVCU doors with a Euro-groove. A slim-line version is also available for timber doors and composite doors. The IFI Sabre restrictor is available in two sizes: 335mm and 500mm with a choice of passivated mild or stainless steel. An addition to the range of Sabre Hardware, IFI also supplies fixings, tools, sealants, chemicals, other branded hardware and consumables exclusive to window fabricators and installers. □
